# Discrimination between phenolic and GFP fluorescence

Simultaneous infiltration of WT strain and GFP labelled strain of *P. syringae*

### 3. Sucrose metabolism and abiotic stress tolerance

# Ectopic overexpression of extracellular, cell wall invertase CIN 1 in tomato

Assumed fruit specific promoter

*CIN1* = cell wall invertase from  
*Chenopodium rubrum*

The CIN1 transgene is expressed in various tissues during development

Handout for Participant of the EPPN Summer School On Plant Phenotyping - Please do not distribute

Albacete et al., in revision

# *CIN1* overexpression: drought stress tolerance

- Extreme drought tolerance in *CIN1* plants

Drought stress tolerance in *CIN1* plants are not due to differences in growth parameters

WT

Handout for Participant of the EPPN  
Summer School On Plant  
CIN1-91  
Phenotyping - Please do not distribute

# *CIN1* overexpression: drought stress tolerance

Soil water potential and relative water content improved in *CIN1* plants

wt plants dried the substrate faster than *CIN1* plants

RWC was severely reduced during drought stress in wt

## *CIN1* overexpression: water use efficiency

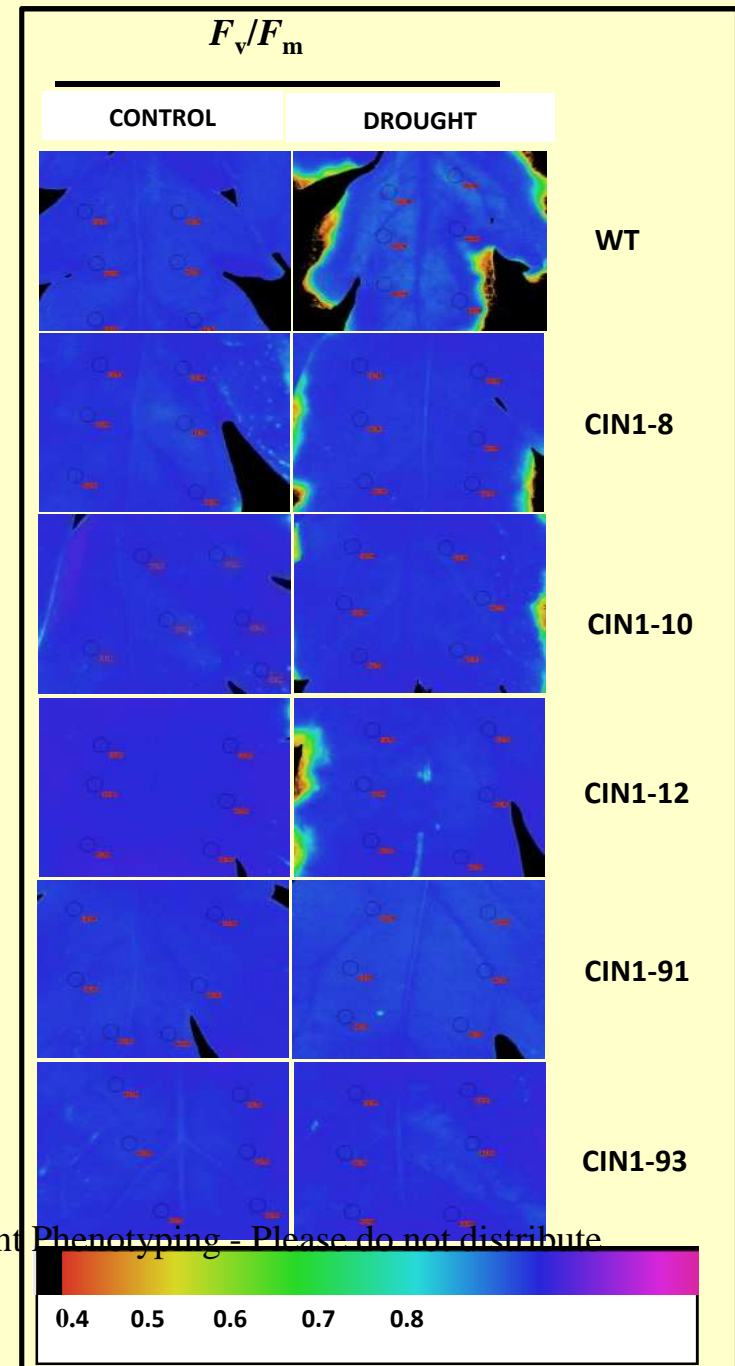

- Water use efficiency (WUE) is improved in *CIN1* plants under drought stress

Accumulated transpiration during drought was significantly lower in *CIN1* plants.

WUE (measured as the **amount of generated biomass per ml of transpired water**) was higher in *CIN1* plants.

# *CIN1* overexpression: chlorophyll fluorescence

# Carbohydrate sink metabolism: key enzyme activity signatures

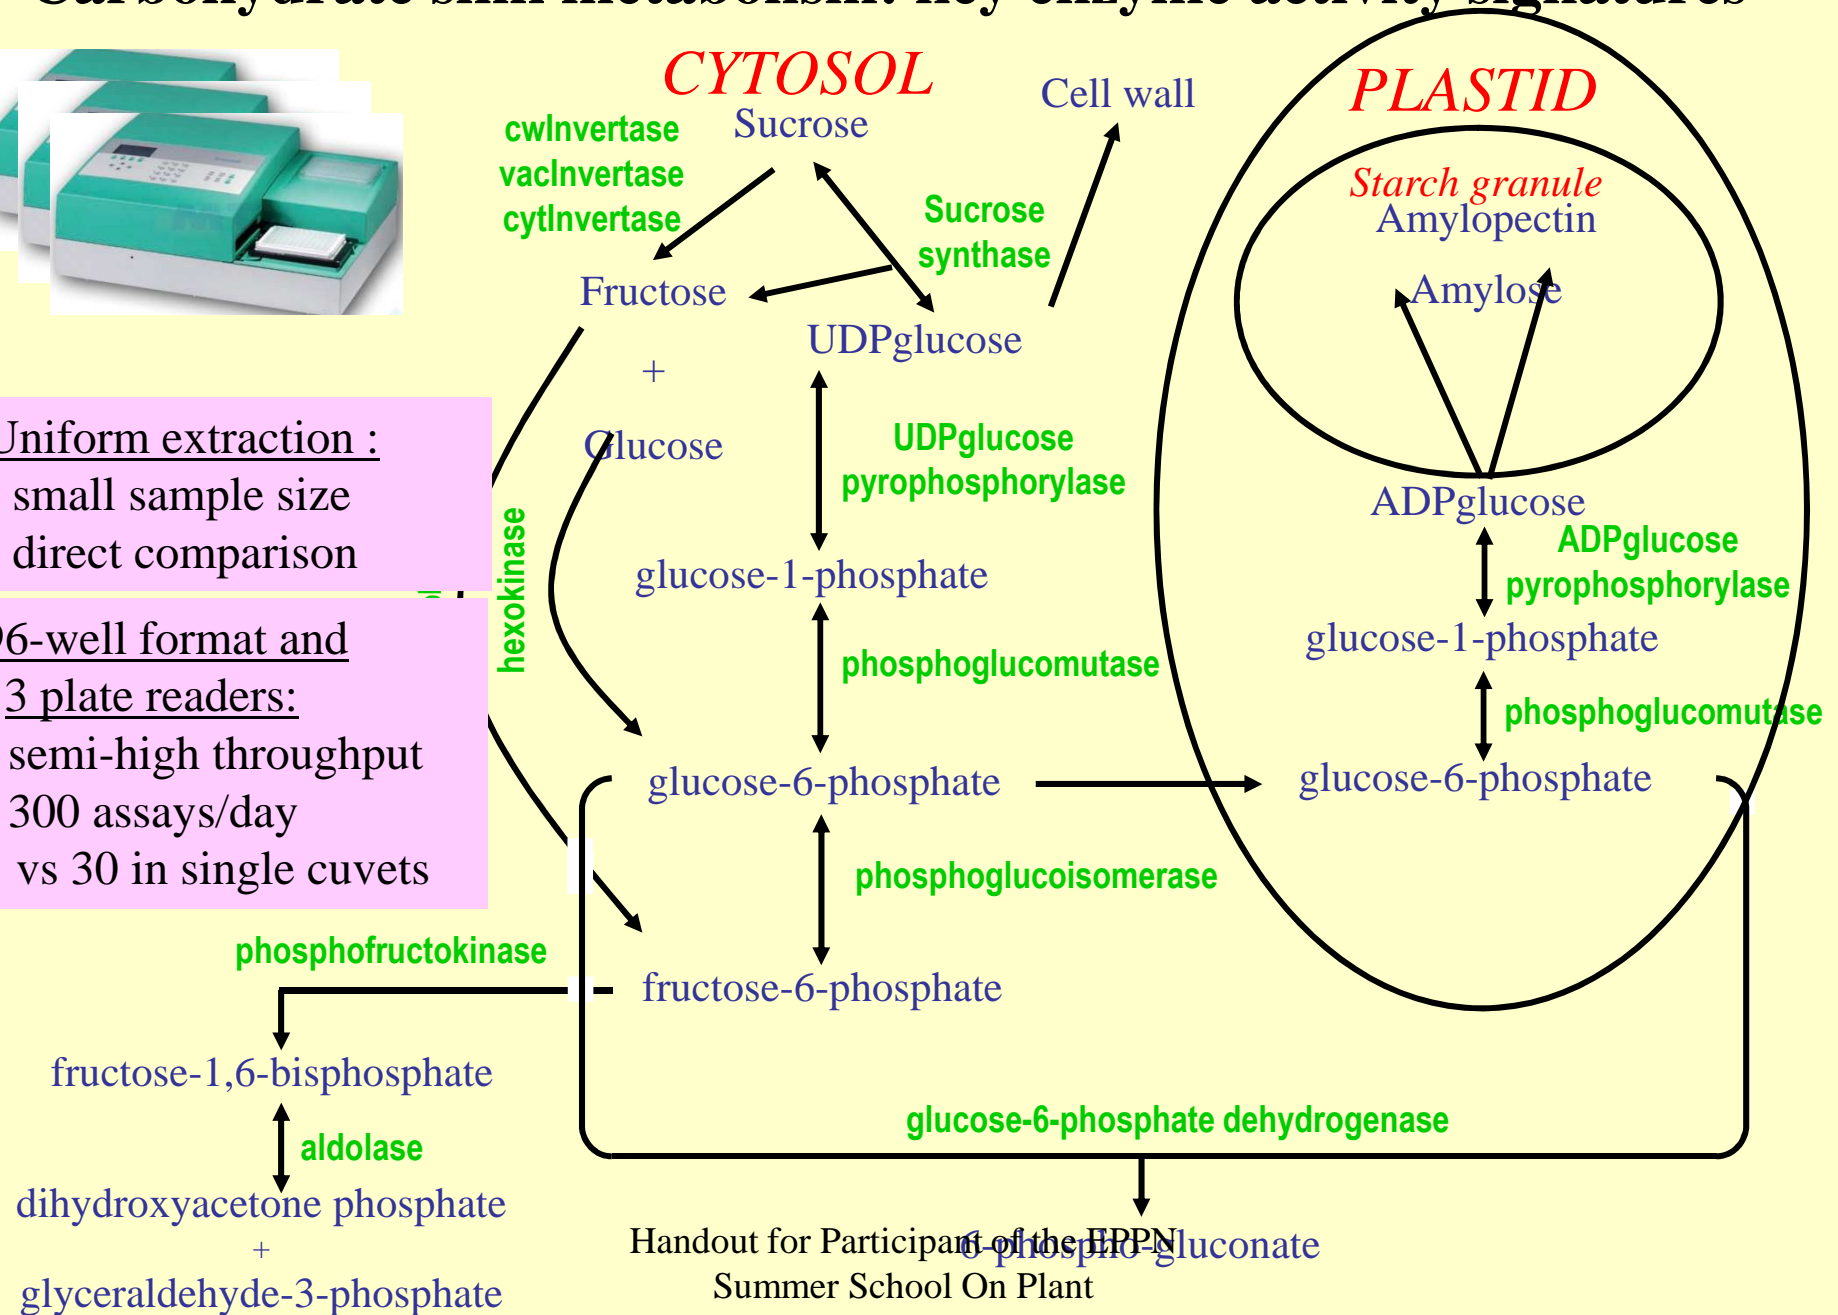

## Uniform extraction :

- small sample size
- direct comparison

## 96-well format and 3 plate readers:

- semi-high throughput
- 300 assays/day vs 30 in single cuvetts

# **CIN1 overexpression: enzyme activity signatures**

Sucrolytic- and invertase inhibitor activities in *CIN1* plants under drought

Assay	Signature under drought stress	control
invertase inhibitor	decrease in <i>CIN1</i> , increase in wt	lower activity in wt
vacuolar invertase	decreased activity	
cell wall invertase	decreased activity	lower activity in wt
cytoplasmic invertase	decreased activity	
Susy	decreased activity	higher activity in wt
Aldolase	decreased activity	
Glucose-6 phosphate dehydrogenase	weak decrease in <i>CIN1</i> , strong decrease in wt	higher activity in wt
Hexokinase	increase in <i>CIN1</i>	
phosphofructokinase	increase in <i>CIN1</i> , decrease in wt	higher activity in wt
phosphoglucosomerase	increased activity	higher activity in wt
phosphoglucomutase	no change in <i>CIN1</i> , decrease in wt	higher activity in wt
UGPase	no change in <i>CIN1</i> , decrease in wt	higher activity in wt
Fructokinase	no change in <i>CIN1</i> , decrease in wt	higher activity in wt
AGPase	not detectable	not detectable

Sugar contents:

Handout for Participant of the EPPN Summer School On Plant Phenotyping. Please do not distribute.  
-control conditions, increased fructose and glucose levels in *CIN1* plants

-drought stress, no specific changes

# Instrumental analysis: Hormone levels

## 1. Cytokinins

### a) biological active

- *trans*-Zeatin (tZ)
- *trans*-Zeatin-Ribosid (tZR)
- Dihydrozeatin (DHZ)
- Dihydrozeatin-Ribosid (DZR)
- Isopentenyl-Adenin (iP)
- *cis*-Zeatin (cZ)

### b) conjugates:

- Isopentenyl-Adenin-7-Glucoside (IP7G)
- *trans*-Zeatin-O-Glucosid (ZOG)
- *trans*-Zeatin-O-Glucosid-Ribosid (ZOGR)
- *trans*-Zeatin-7-Glucoside (tZ7G)
- *trans*-Zeatin-9-Glucoside (tZ7G)

## 2) other hormones/ signal molecules

- Indolacetic Acid (IAA)
- Absciscic Acid (ABA)
- Jasmonic Acid (JA)
- Salicylic Acid (SA)

## 3) Currently established: Gibberellins

- G A1
- G A3
- G A4
- G A5
- G A6
- G A8

# *CIN1* overexpression: hormonal status

## SUCROSE METABOLISM

## HORMONAL FACTORS

•Decrease of the ET precursor ACC in *CIN1* plants under drought stress

•Increase in t-Zeatin for some *CIN1* lines under drought stress

•IAA also increased in some *CIN1* lines under drought stress

Handout for Participant of the EPPN Summer School On Plant Phenotyping - Please do not distribute

•No change in ABA levels!

➤(3) Extracellular  
invertase contributes to  
abiotic stress tolerance
